

# Preliminary Consumption Information

## July 2017

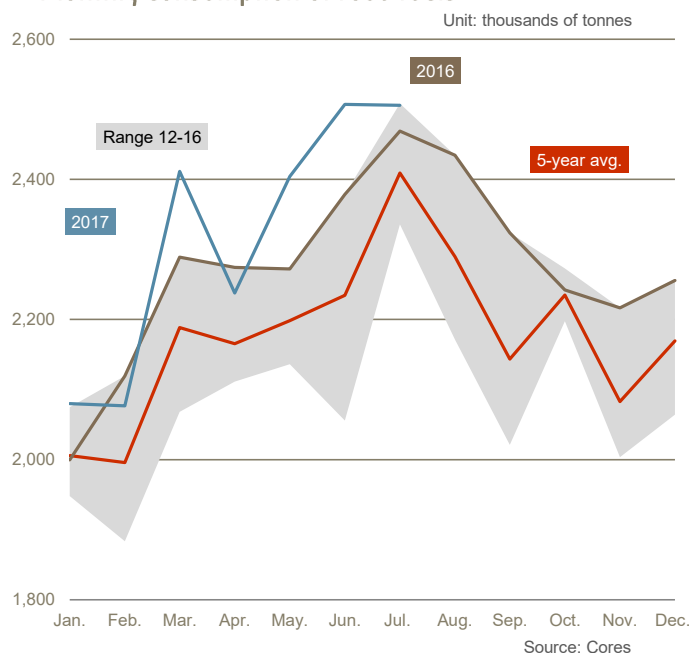

Maximum natural gas consumption intended for electricity generation since March 2012 (8,229 GWh)

In July, road fuel consumption increased (2,506 kt; +1.5% vs. July 2016), having been placed slightly under last June. Both, road diesel (+1.8%) and gasolines (+0.2%) grew interannually. The year-to-date (16,223 kt) presented positive variation rates with respect to year 2016, 2.1% in gasolines and 2.8% in road diesel.

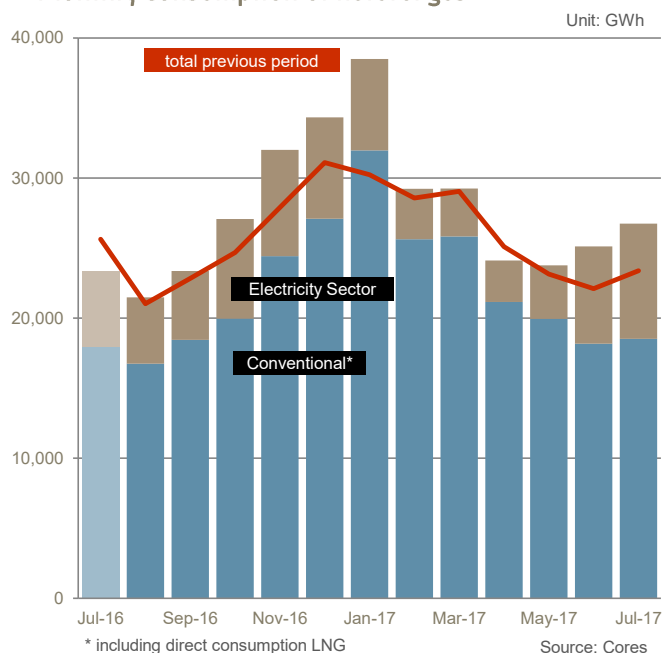

This month, gasolines (+0.2%), gasoil (+2.4%) and kerosene (+8.0%) consumption grew whilst LPG's and fuel oil descended, 19.2% and 4.7% respectively. However, in the year-to-date, every product showed increments except for the fuel oil (-6.9%): LPG (+2.5%), gasolines (+2.1%), kerosene (+9.5%) and gasoil (+1.4%).

For the third consecutive month, in July, natural gas consumption augmented (+14.4% vs. July 2016) up to 26,758 GWh. It outstood the growth of direct consumption LNG (+31.1% vs. July 2016) and the one intended for electricity generation (+53.3% vs. July 2016), having reached the maximum level since March 2012. Conventional consumption also ascended to a lesser extent (+1.8%). The year-to-date registered an increment of 8.3% with respect to the same period in 2016, similar variation as in the rolling year (+8.4%).
